# Student Record System: Quick Start Guide

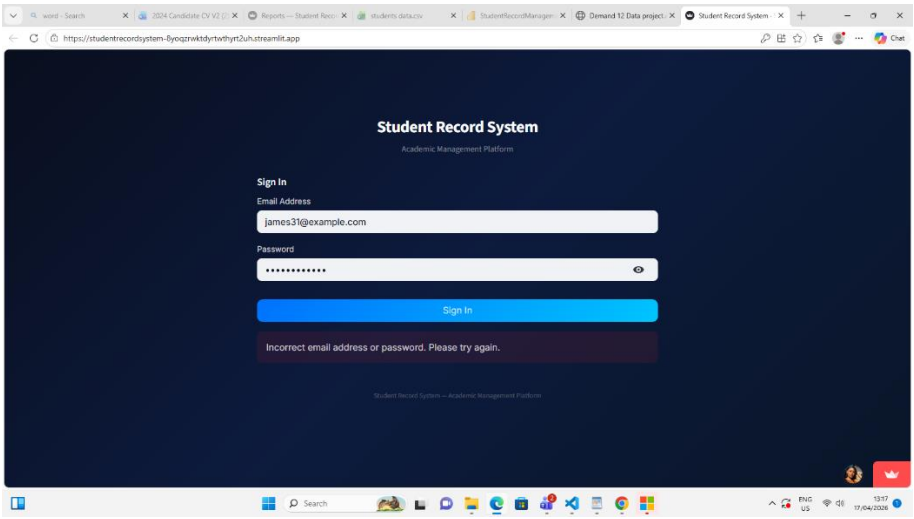
The Student Record System uses role-based access to manage academic data efficiently.

---

### 1. Admin View

Designed for institutional oversight and data management.

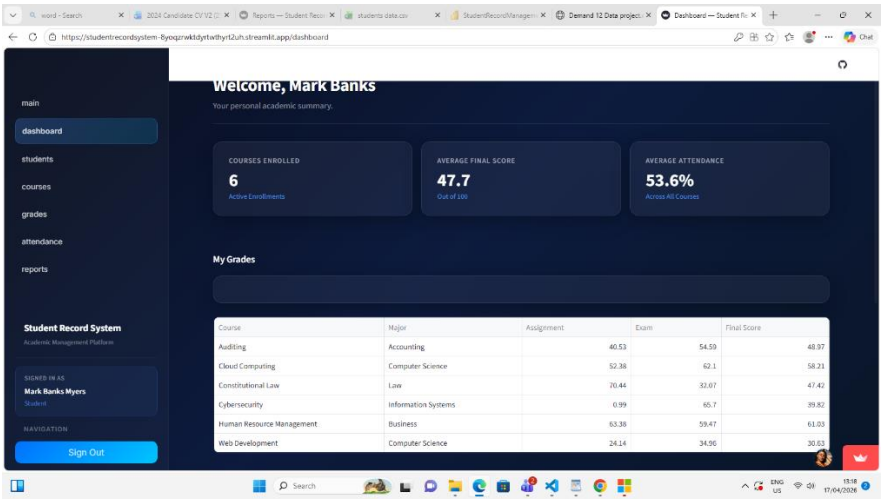
- **Analytics:** Track total students (457), active courses, and institutional averages for grades and attendance.
- **Student Directory:** Search and filter the full student database by name, email, or gender.
- **Management:** Access centralized lists for courses, attendance tracking, and reporting.



### 2. Student View

A personalized portal for students to track their own progress.

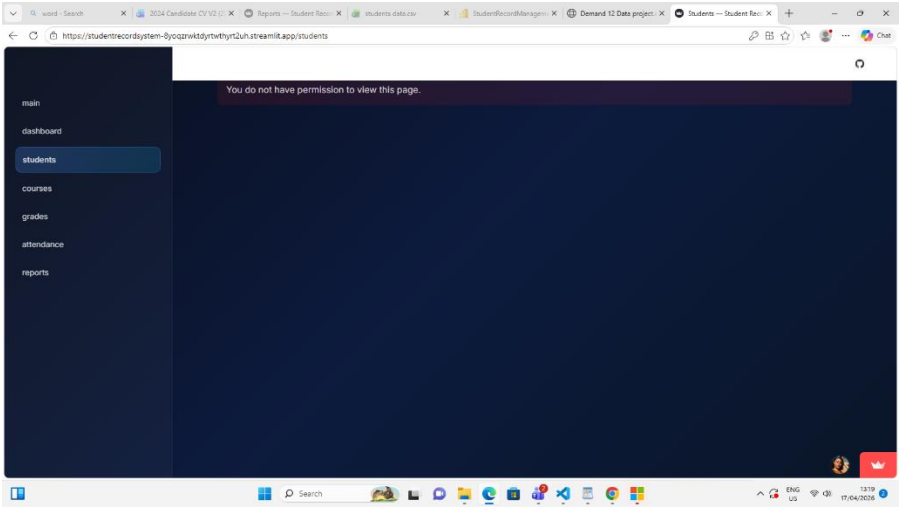
- **Academic Summary:** View your total active enrolments and personal performance averages.
- **Gradebook:** A detailed table showing assignment scores, exam results, and final grades for each course (e.g., Auditing, Cloud Computing).



### 3. Navigation & Security

- **Sidebar:** Use the left-hand menu to toggle between the Dashboard, Grades, and Reports.
- **Permissions:** You will see a **"Permission Denied"** notice if you attempt to access pages restricted to other roles.

- **Logout:** Click the **Sign Out** button at the bottom of the sidebar to secure your data.



# Admin Login & Management Guide

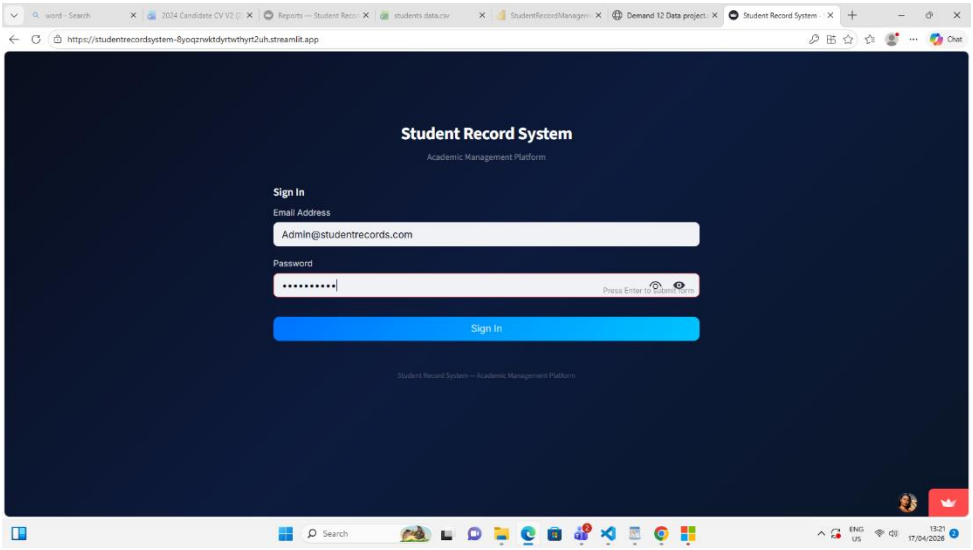
The following steps outline the administrative workflow for the **Student Record System**, from initial login to record management.

---

### 1. Secure Authentication

Access the platform via the centralized login screen.

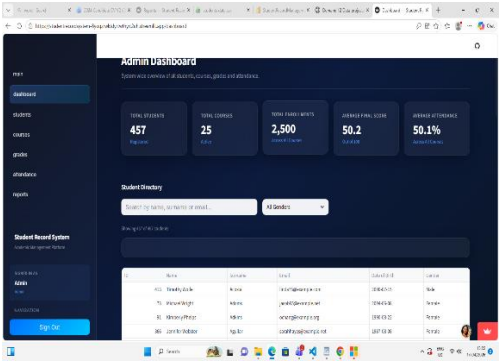
- **Credentials:** Enter your administrative email and password.
- **Tip:** Use the "eye" icon in the password field to toggle visibility.
- **Action:** Press **Enter** or click the blue **Sign In** button to access the dashboard.

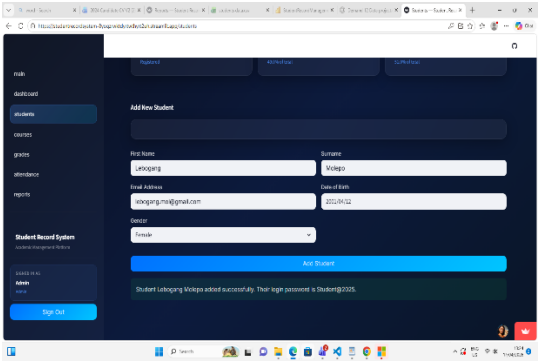


### 2. Adding New Records

Navigate through the sidebar to populate the system database:

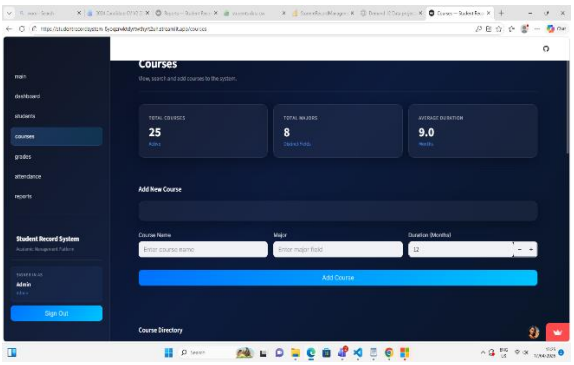
- **Students:** Fill in the **Add New Student** form (Name, Email, DOB, Gender). Upon successful addition, the system generates a default password (e.g., Student@2025).
- **Courses:** Use the **Add New Course** section to define the Course Name, Major field, and Duration in months.

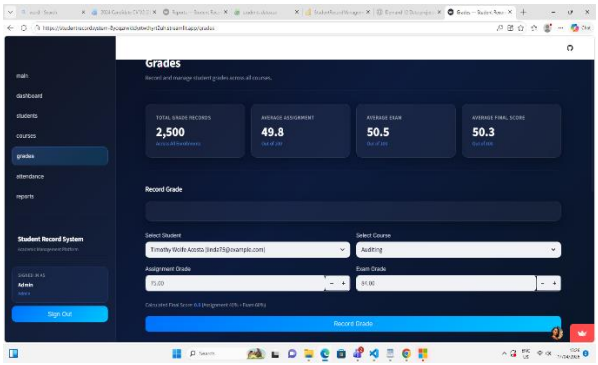


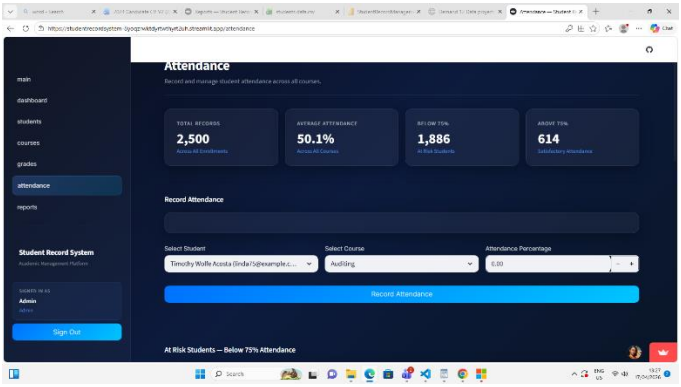


### 3. Academic Data Entry

- **Grades:** Select a student and a specific course from the dropdown menus. Enter the **Assignment Grade** and **Exam Grade**. The system automatically calculates the **Final Score** based on a weighted formula (40% Assignment + 60% Exam).
- **Attendance:** Record the attendance percentage for students per course. The system flags "At Risk" students whose attendance falls below **75%**.

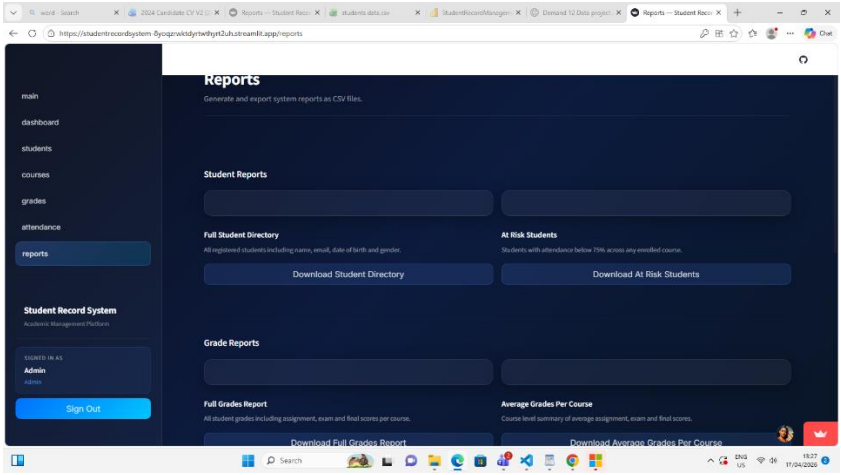






### 4. Search & Verification

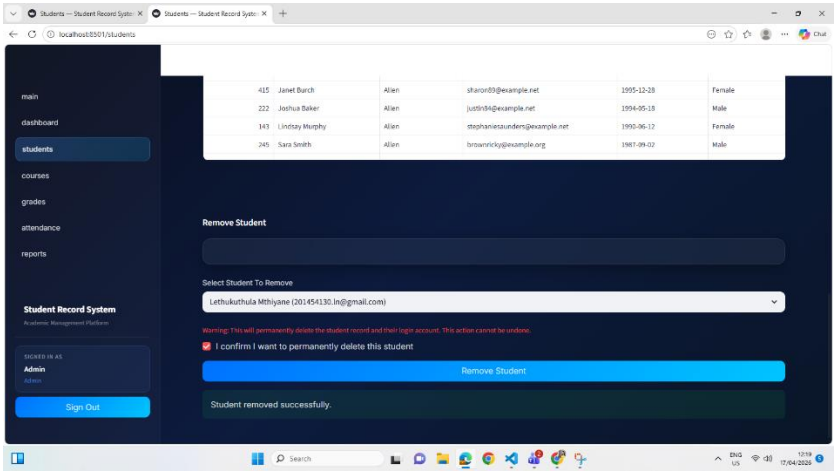
- Use the **Student Directory** to instantly verify new entries. You can search by first name (e.g., searching "Lebogang") to confirm their ID and contact details have been correctly saved to the database.



**Removing a student**

To maintain data integrity, the removal process includes a mandatory confirmation step:

1. **Select Student:** Use the **"Select Student to Remove"** dropdown menu to find the specific student by name and email.
2. **Acknowledge Warning:** A red warning notice will appear, stating: *"This will permanently delete the student record and their login account. This action cannot be undone."*
3. **Confirm Deletion:** You must check the box labelled **"I confirm I want to permanently delete this student"** to activate the removal button.
4. **Finalize:** Click the blue **Remove Student** button.
5. **Verification:** Upon completion, a green confirmation bar will appear at the bottom of the screen stating, **"Student removed successfully."**



**Note:** Deleting a student also removes their associated login credentials. Ensure all necessary reports are exported before finalizing this action.
